

Solid stainless steel wire

Solid stainless steel offers a higher resistance to corrosion environments and a longer life span on the fence. The 316 grade is the wire of choice for highly corrosive coastal areas.

Features:

- Stainless steel grade 304 can be used in most corrosive environments and near the coast (5km)
- Stainless steel grade 316 can be used in most harsh corrosive environments and on the coast .
- High in tensile strength

Specifications:

AISI 316 Stainless Steel
Tensile Strength, Ultimate: 580 MPa (58kg/mm²)
Tensile Strength, Yield: 290 MPa (29kg/mm²)
Elongation at Break 50 %

AISI 304 Stainless Steel
Tensile Strength, Ultimate: 510 MPa (50kg/mm²)
Tensile Strength, Yield 215 MPa (21kg/mm²)
Elongation at Break 70%
